

Find insights, define number of trials before giving up the deal, duration and number of tries before closing the deal

SALES EFFORT & DEAL CYCLE DEFINITION

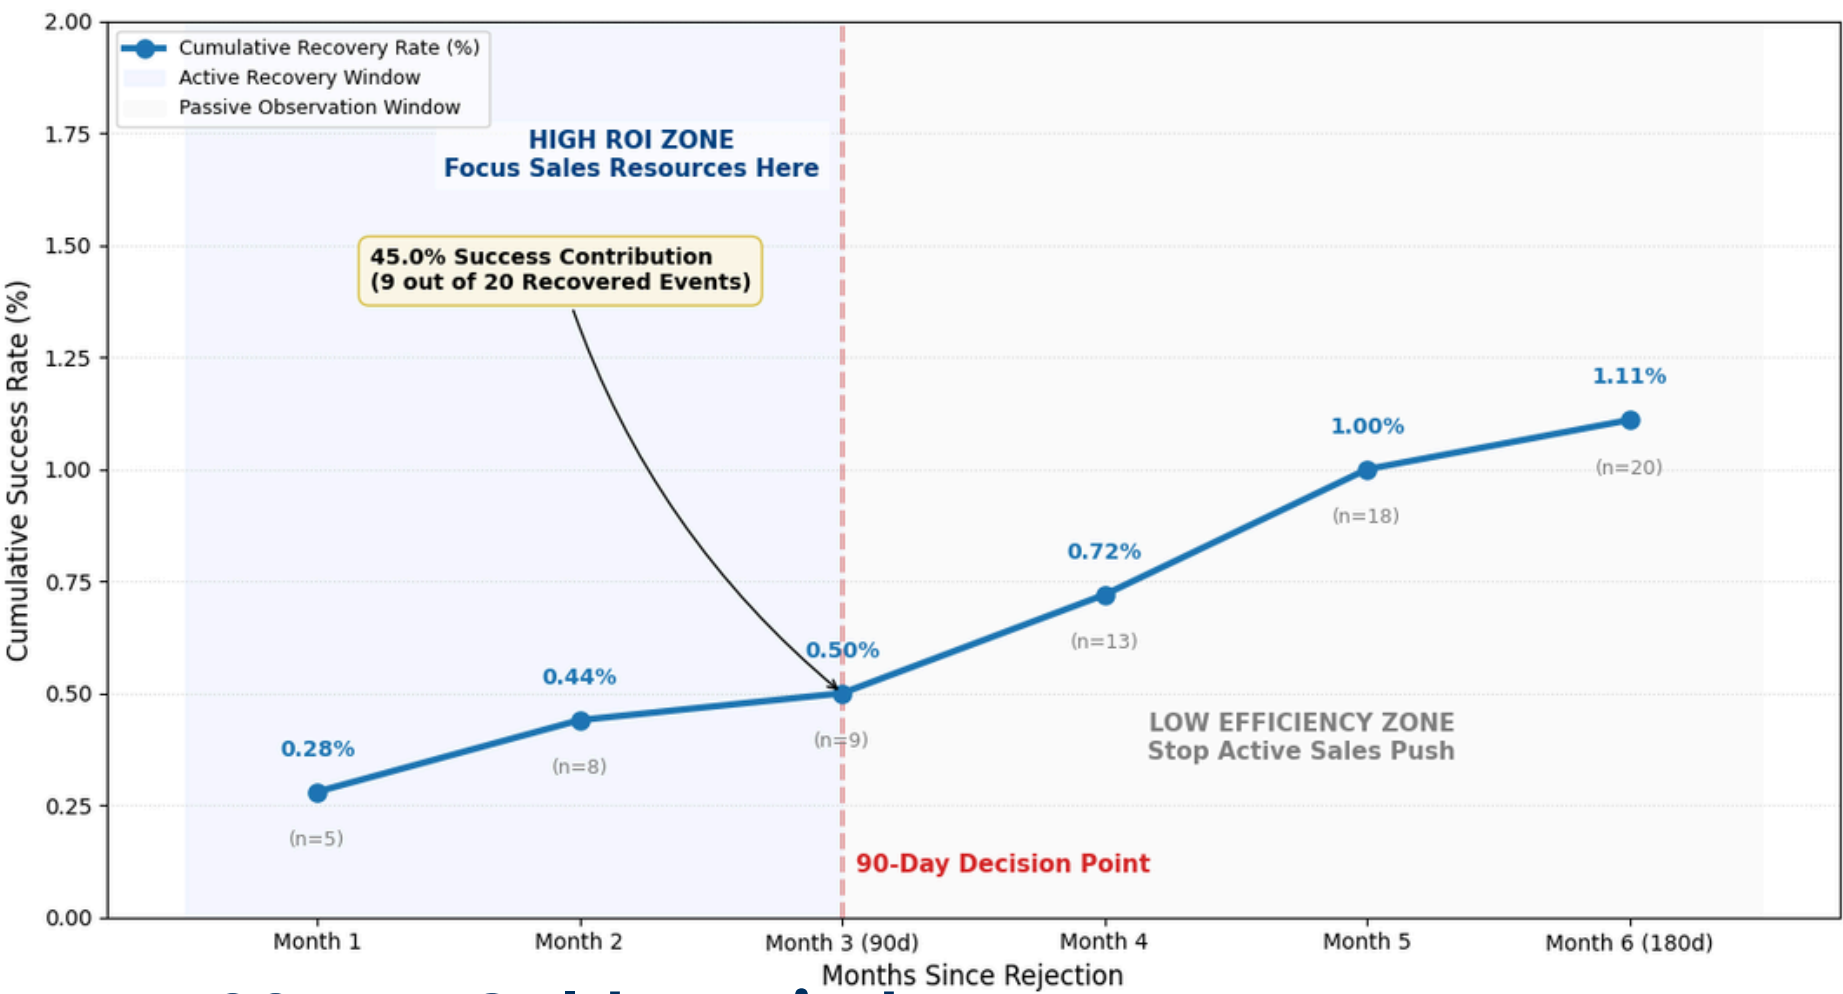

- Found the 60 most common words in the messages of all follow-up logs.
- Picked relevant keywords from this list to create a dictionary.
- Used the dictionary to split logs into Sales Attempts (e.g., package, quote, offer) vs. Post-Sales/Admin (e.g., invoice, payment, amend).
- Treat “Proposed” + Sales Attempts as valid sales actions.
- 180-day window: Used to define a valid sales cycle (separating old and new deals).
- For each Signed deal, compute:
 - Duration = days from last valid Sales Attempt to signing date.
 - Tries = count of valid sales actions before signing.

Sales Recovery Strategy: 90-Day vs. 180-Day (Event-based Analysis)

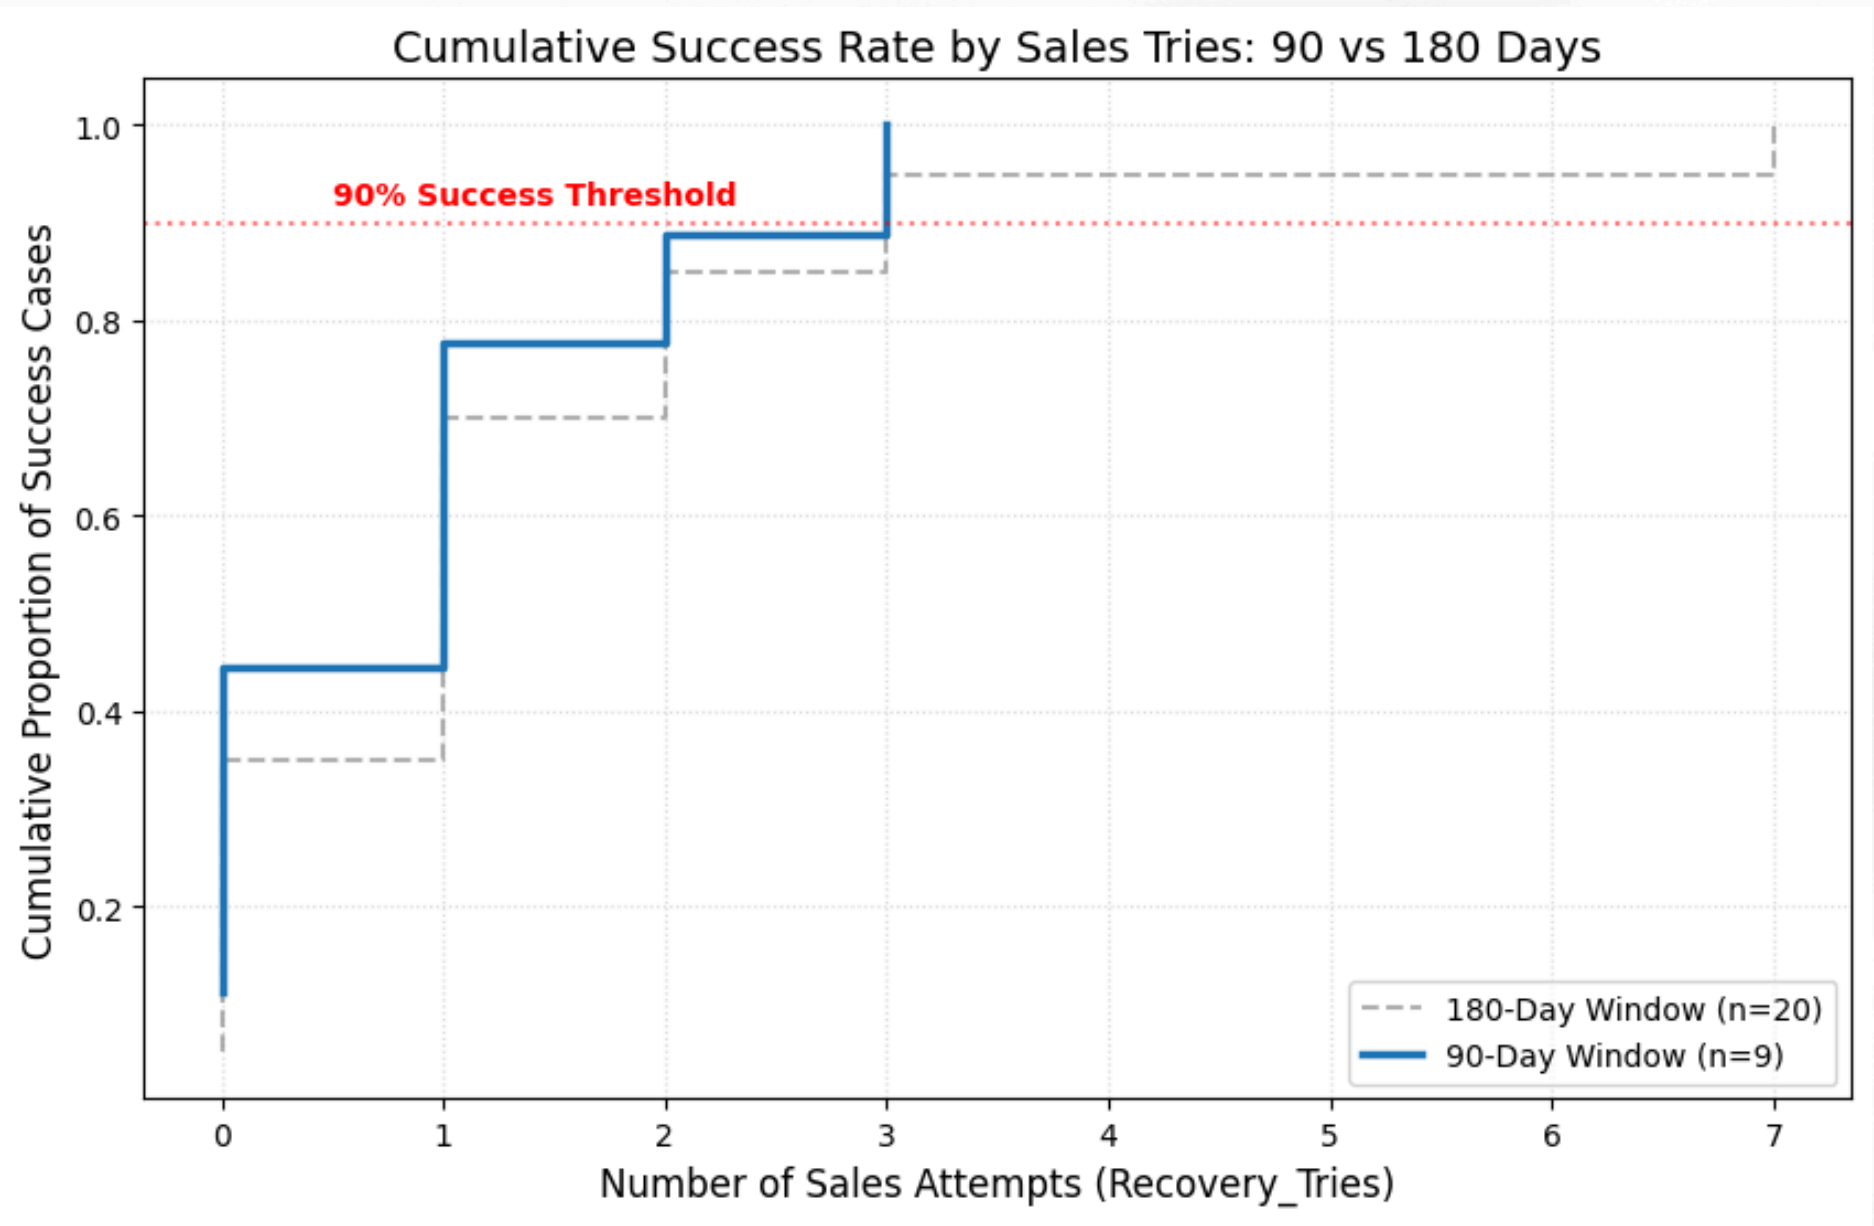

- **90-Day Golden Window:**
 - 45.0% of all recoveries (9 out of 20) happen within the first 90 days.
- **The ROI Peak:**
 - The cumulative success rate reaches its highest efficiency at Month 3 (0.50%).
- **Late-Stage Slowdown:**
 - Growth slows down after 90 days.
 - Much harder to get new signed at the late stage.

The Efficiency Gap: ROI vs. Sales Effort (Updated)

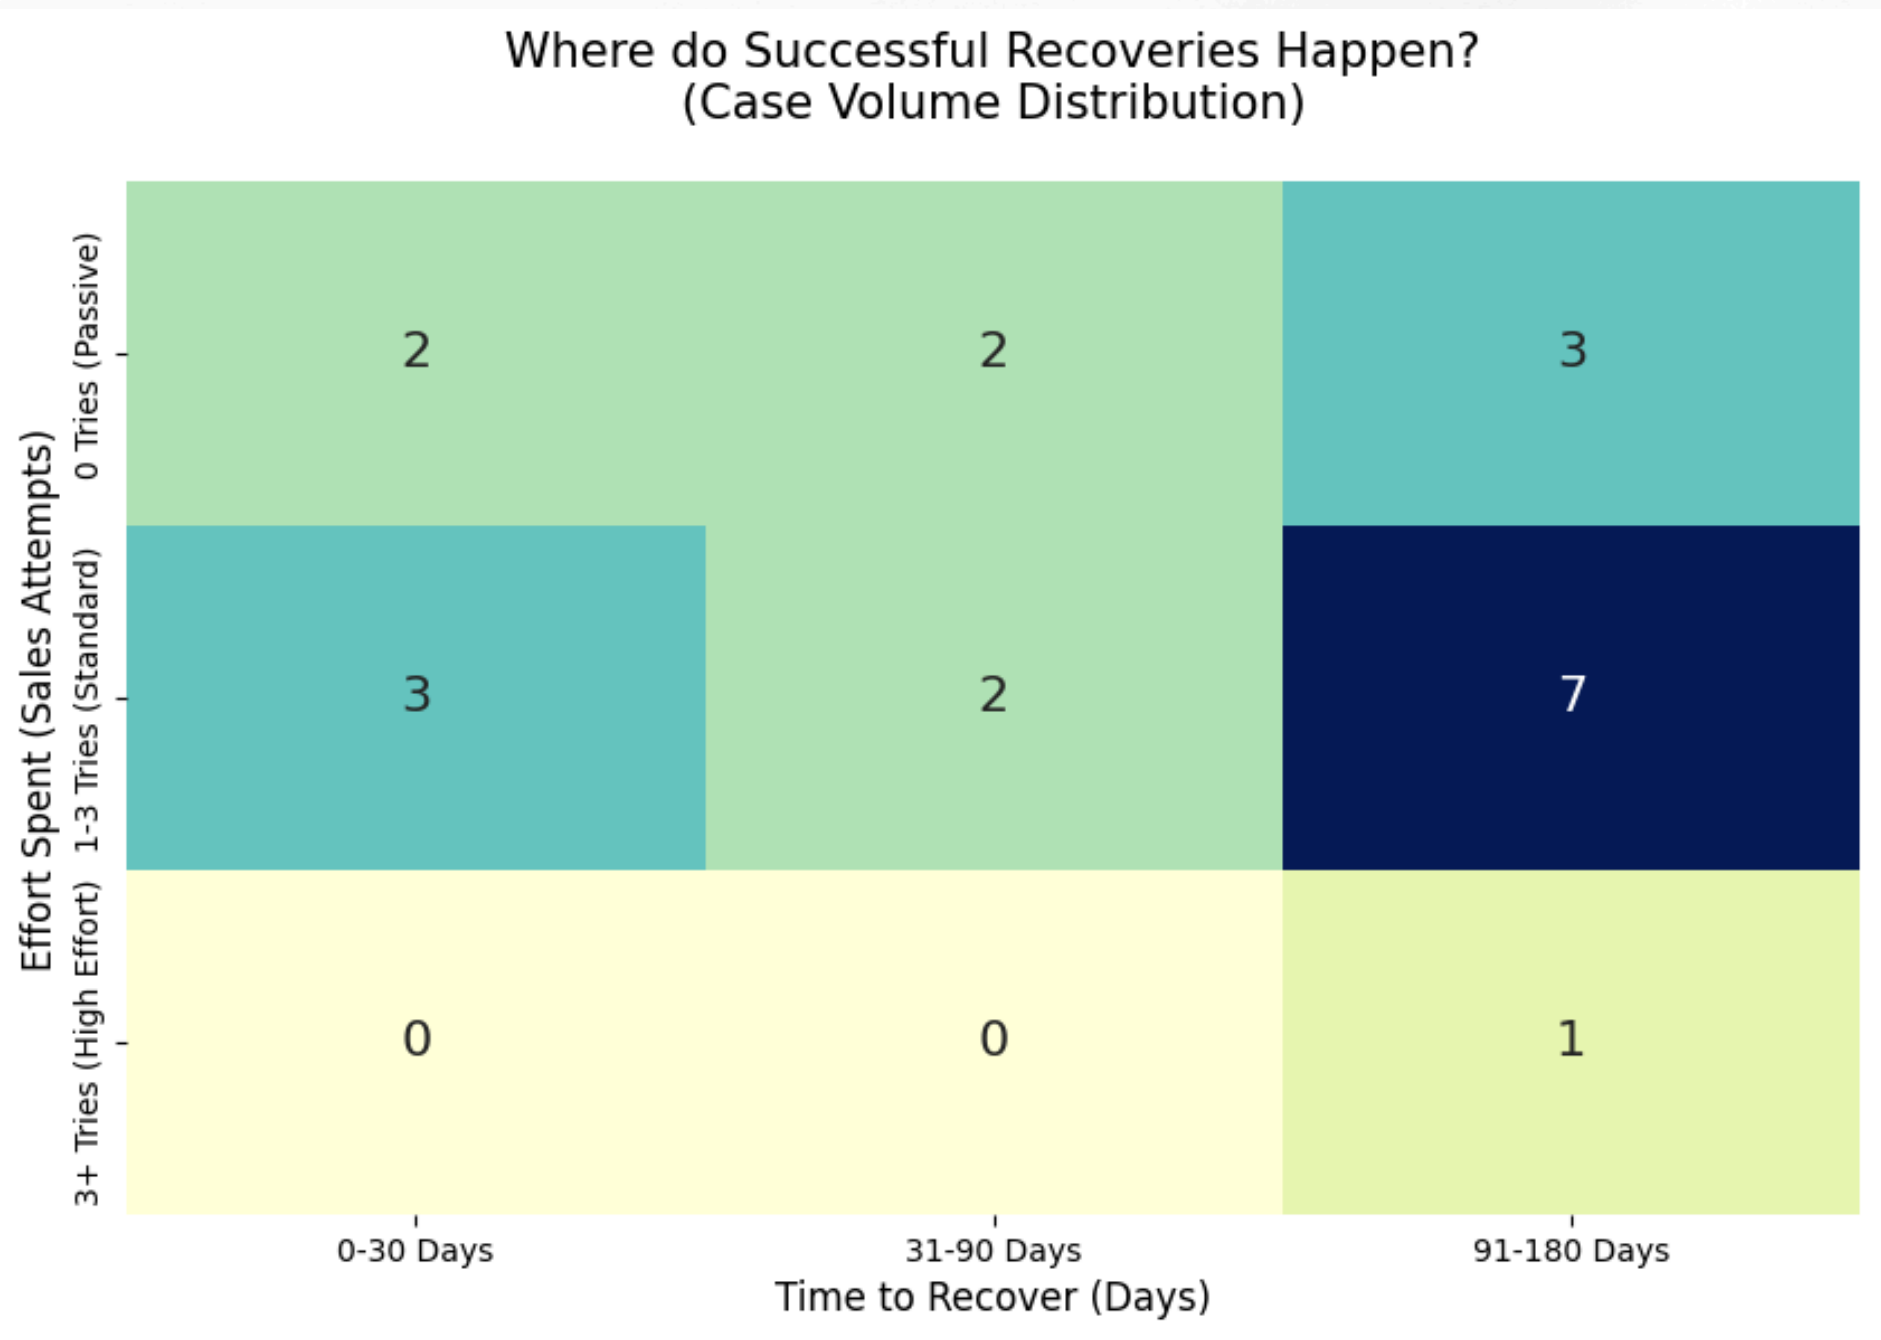

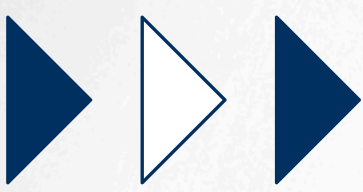

- **Golden Window (0-90 Days):**
 - 5.77% Conversion Rate with only 156 attempts.
- **Long-tail Period (91-180 Days):**
 - 2.86% Conversion Rate despite heavy investment of 384 attempts.
- **The Efficiency Gap:**
 - Early stage offers 2.02x Higher ROI.
 - 71% of total sales effort is spent in the late stage for minimal gains.

Find insights, define number of trials before giving up the deal, duration and number of tries before closing the deal

- **The Power of 3 (90-Day Window):**
 - 100% of cases were recovered within just 3 sales attempts.
 - Effort beyond 3 attempts yielded zero additional gain.
- **90% Success Threshold:**
 - Both windows reach the 90% threshold by the 3rd attempt.
- **The Efficiency Gap (180-Day Window):**
 - Required up to 7 attempts to capture the full sample.
- **High Initial Velocity:**
 - Approx. 45% of successes in the 90-day window occurred at 0 attempts.

Find insights, define number of trials before giving up the deal, duration and number of tries before closing the deal

- **The "Low Effort" Sweet Spot (0-90 Days):**
 - 45% of successes (9 out of 20) were achieved with 0-3 tries.
 - This is our High ROI Zone where timing beats persistence.
- **The "Standard Effort" Surge (91-180 Days):**
 - Success shifts to the 1-3 Tries category (7 cases).
 - Requires more active follow-up to close deals in this later window.
- **Passive Success (The Power of Timing):**
 - 35% of all recoveries (7 cases) happened with ZERO sales attempts.
 - Proof that staying in the customer's mind is as important as the push.
